

# ngVLA: Project Overview

R. Selina, ngVLA Project Engineer

[rselina@nrao.edu](mailto:rselina@nrao.edu)

# The Jansky Very Large Array

1972 – Approved by Congress  
1975 – First Antenna in Place  
1980 – Full Science Operations  
2001 – Electronics Upgrade Approved by NSF  
2011 – Jansky VLA Full Science Operations

[ngvla.nrao.edu](http://ngvla.nrao.edu)

# 2018 Science Meeting

- Meeting was science-focused and wavelength agnostic
  - Brought together a broad cross—section of community
- 3 Parallel Sessions:
  - Origins of Exoplanets and Protoplanetary Disks
  - Mechanisms of Galaxy Evolution
  - Black Holes and Transient Phenomena
- 200+ registrants and *70+ students!* - We are creating our next-generation of users.

# Science Book

- Science Book published by ASP!
  - 88 peer-reviewed contributions received
  - 286 unique authors
- Volume is culmination of:
  - Numerous science/technical meetings, beginning with Jan 2015 AAS
  - Community-led Science Use Cases:
    - 80+ submitted for 'Reqs to Specs' process (ngVLA memo # 18)
  - Community Studies Program:
    - 38 studies over two rounds, financially supported by NRAO.

# Key Science Goals

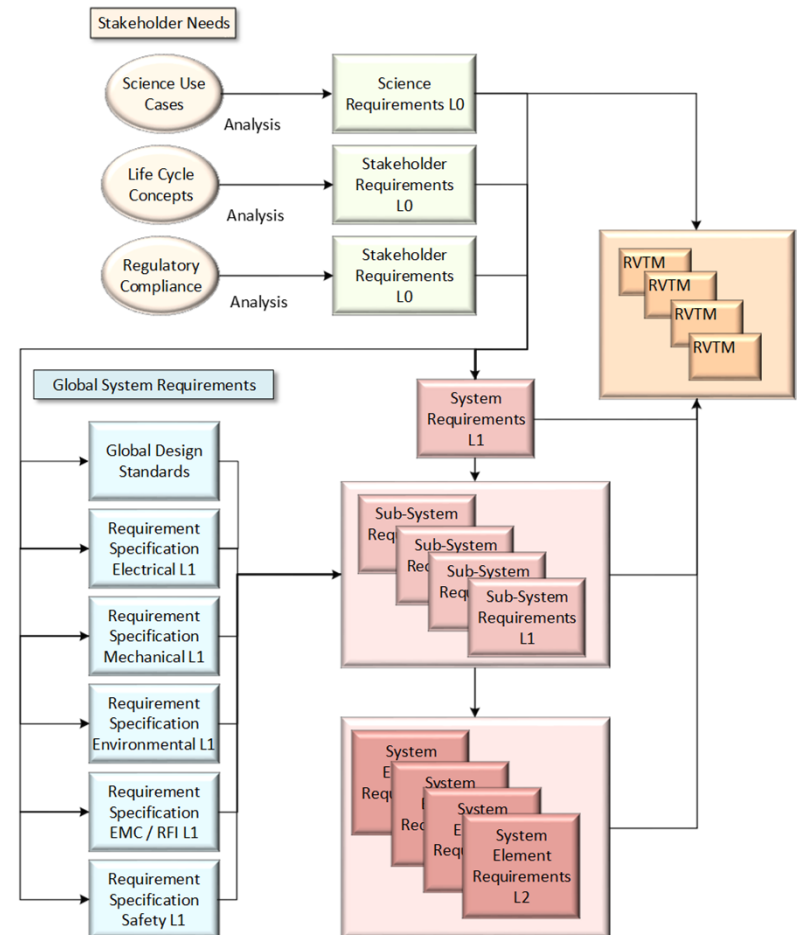

- *Unveiling the Formation of Solar System Analogues on Terrestrial Scales*
- *Probing the Initial Conditions for Planetary Systems and Life with Astrochemistry*
- *Charting the Assembly, Structure, and Evolution of Galaxies Over Cosmic Time*
- *Using Pulsars in the Galactic Center as Fundamental Tests of Gravity*
- *Understanding the Formation and Evolution of Stellar and Supermassive BH's in the Era of Multi-Messenger Astronomy*

**Highly synergistic with next-generation ground-based OIR and NASA missions.**

# Requirements Flow-Down

- Begins with Science Use Cases (>80)
  - Distilled into ~200 unique observations
- Prioritization by SAC
  - 5 KSGs born out of various use cases
- Converted into Level 0 Science Reqs.
  - 36 Requirements to support KSGs
    - 18 Functional Reqs.
    - 18 Performance Reqs.
- Translated into Level 1 Technical Reqs.
  - 180+ System Level Reqs.

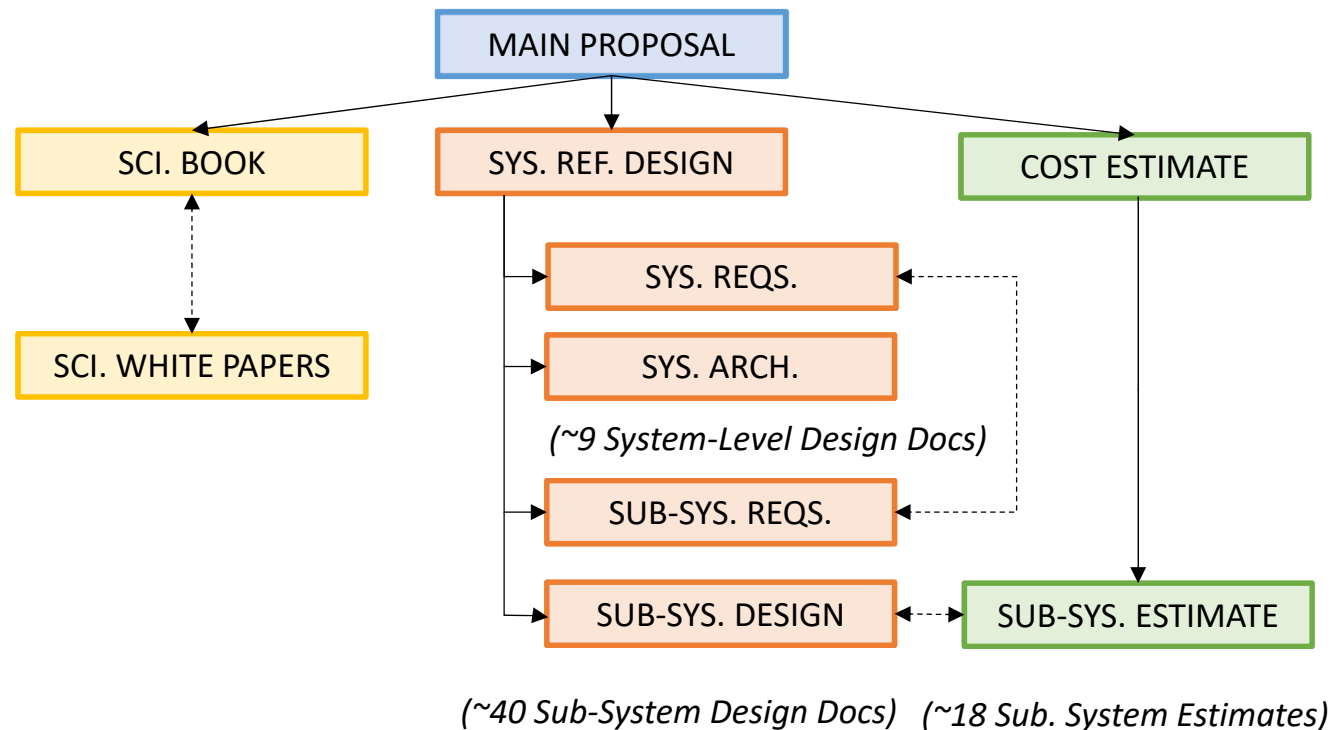

# Design Drivers

- **Frequency Coverage:** 1.2 to 116 GHz, both edges drive design.
- **Sensitivity:** Area,  $T_{\text{sys}}$ , bandwidth, deconvolution algorithms.
- **Resolution:** 400km+ minimum extent, continental scale for multi-messenger.
- **Image Fidelity:** Even sampling of (u, v)-plane from 10s of meters to 100s of km.
- **Dynamic range:** pointing, phase cal, electronic stability.
- **Large-N:** central archive and compute. High level data product delivery pipelines.

# Astro2020: ngVLA Reference Design

- A baseline design with known cost and low technical risk. Technical & cost basis of the Astro2020 Decadal Survey proposal.
- 1500 page, 75 document package that describes end-2-end system design.
- Bottom-up supporting cost estimate.

- **1.2 - 116 GHz** Frequency Coverage
- **Main Array:** 214 x 18m offset Gregorian Antennas.
  - Fixed antenna locations across NM, TX, AZ, MX.
- **Short Baseline Array:** 19 x 6m offset Greg. Ant.
  - Use 4 x 18m in TP mode to fill in  $(u, v)$  hole.
- **Long Baseline Array:** 30 x 18m antennas located across continent for baselines up to 8860km.

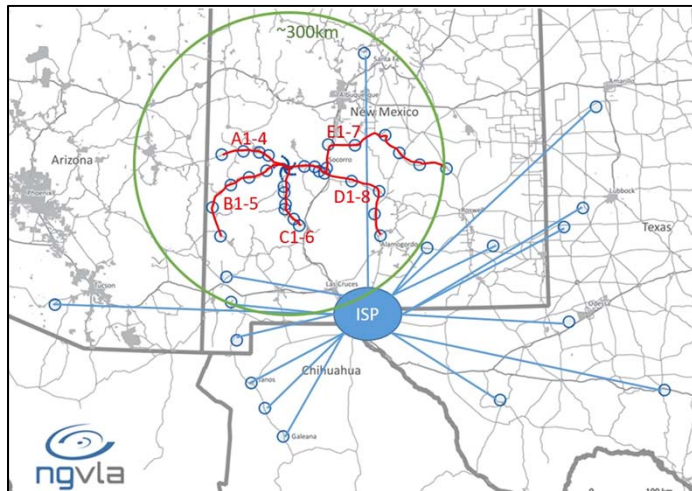

Band #	Dewar	$f_L$ GHz	$f_M$ GHz	$f_H$ GHz	$f_H : f_L$	BW GHz
1	A	1.2	2.35	3.5	2.91	2.3
2	B	3.5	7.90	12.3	3.51	8.8
3	B	12.3	16.4	20.5	1.67	8.2
4	B	20.5	27.3	34.0	1.66	13.5
5	B	30.5	40.5	50.5	1.66	20.0
6	B	70.0	93.0	116	1.66	46.0

# The Main Array (MA) Configuration

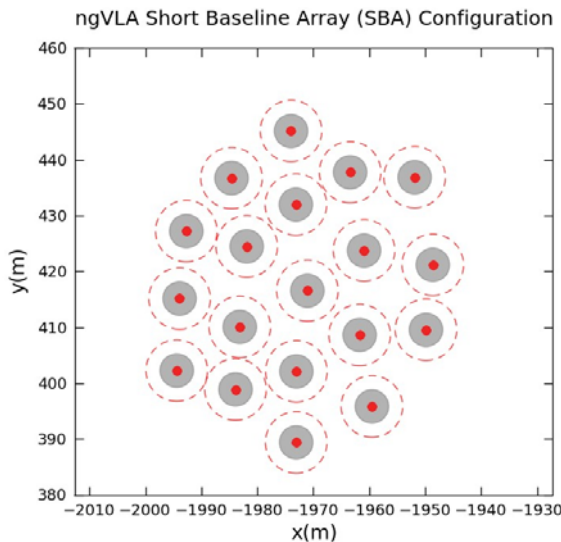

Radius	Collecting Area Fraction
$0 \text{ km} < R < 1.3 \text{ km}$	44%
$1.3 \text{ km} < R < 36 \text{ km}$	35%
$36 \text{ km} < R < 1000 \text{ km}$	21%

# Short Baseline Array (SBA)

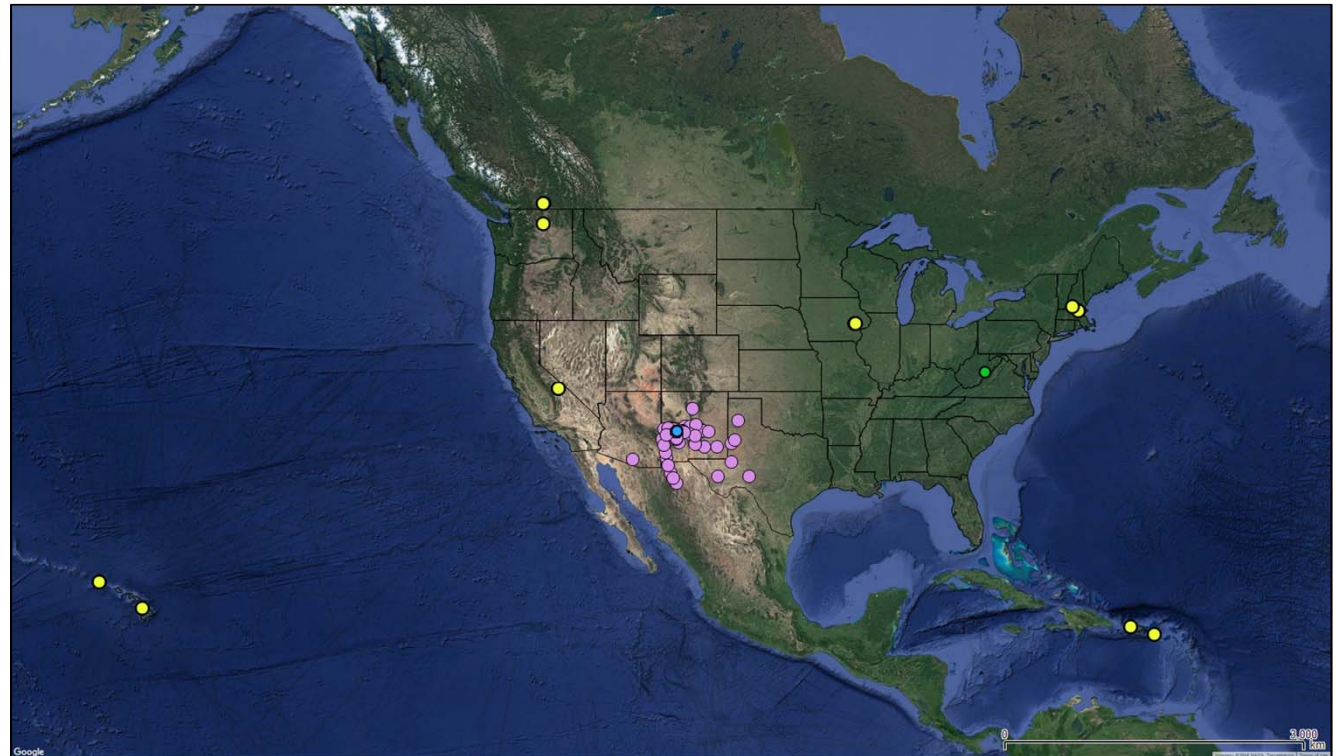

- Short Baseline Array of 19 x 6 m
- Total Power Array of 4 x 18 m (included as part of the 214 main array).

# Long Baseline Array (LBA)

- 30 x 18m Antennas at 10 sites.
- Balance between Astrometry & Imaging Use Cases.

Qty	Location	<i>Possible Site</i>
3	Puerto Rico	Arecibo Site
3	St. Croix, US VA	VLBA Site
3	Kauai, HI	Kokee Park Geo. Obs.
3	Hawaii, HI	New Site (off MK)
2	Hancock, NH	VLBA Site
3	Westford, MA	Haystack
2	Brewster, WA	VLBA Site
3	Penticton, BC, CA	DRAO
4	North Liberty, IA	VLBA site
4	Owens Valley, CA	OVRO

# Session Talks

- LBA – T. Maccarone
- Optics – L. Baker
- Antennas – D. Chalmers
- Antenna Electronics – J. Jackson
- Front End – D. Urbain, H. Mani
- Digitizer – M. Morgan
- Correlator – M. Pleasance
- RFI Mitigation – B. Jeffs
- Incoherent Clocking – B. Carlson

# S/W and Computing Considerations

- **Operations Concept:** SRDP (Science Ready Data Products) Telescope
  - Both for 1<sup>st</sup> Observations and Archive projects.
- **Post Processing:** Analysis shows that storing the raw visibilities will be tractable when ngVLA goes into operations.
  - Data processing is post-facto, with system sized for average throughput.
  - Average Data Rate – 25.8 GB/s. Designed for 128 GB/s peak.
  - 4 hr. observation – 372 TB. Requires ~1000 cores to process in a few days.
- **Computing:** Needs can be met with a COTS cluster.
  - Set by time resolution, spectral resolution, and multi-faceting in imaging
  - Some low-frequency, full-beam, w-projection cases restricted in early operations.
  - Plan is a 2000 core cluster. (~30x VLA/ALMA)

# Technical Risks

- Moore's Law
  - Don't need transistor density to continue to increase, but do need Oper./\$ trends to continue.
- The new RFI environment
  - LEO satellite revolution will impact all ground based facilities.
- Cost vs. Risk Curve - Choices
  - E.g., integrated receiver ASIC, composite reflectors

The Economist

# Tech. Development

- Prototype Band 1 Feed, Caltech
- Prototype Band 5 Feed, NRC
- Integrated receiver / digitizer prototype, NRAO CDL
- Two-stage hybrid sterling refrigerator, Raytheon LT-RSP2

# Cost Estimates

- Most recent cost estimate for construction:
  - **\$1.9B** in 2018 base-year dollars.
- Target operations budget of **\$80M/yr.** (3x current VLA + VLBA Ops)
- Scope changes and cost data refinement have adjusted the initial estimate:
  - Short Baseline Array (19 six-meter antennas)
  - Long Baseline Array ( 30 eighteen-meter antennas)
- All ngVLA components will be reviewed as part of Astro2020 process.
- **Next Steps**: Continue at \$6-8M/yr. design through 2021. Ramp up to complete design in 2024. (2 + 3 yr. model)

# Summary

- The ngVLA Reference Design, a credibly-costed and low-technical risk concept, is near complete and will be ready for Astro2020.
- System-level design (requirements, architecture) will be baselined in 2019 to enable sub-system conceptual design down-selects.
- The project is developing novel technologies to a suitable level of technical readiness prior to conceptual design down-selects.
- Major Challenges: No major technological blockers. Challenges are cost-performance optimizations, manufacturability and reliability.
- Next Steps: Submit to Astro2020; Continue Design/Development; Baseline requirements to sub-system level; System-level CoDR by end of 2020.

# Community-Led Advisory Councils

## ngVLA Technical Advisory Council

- Interface between the engineering & computing community and NRAO
- Membership covers a broad range of expertise in relevant technical areas including:
  - Antennas, low-noise receiver systems, cryogenics, data transmission, correlators, and data processing

James Lamb (Caltech : **co-Chair**)

Melissa Soriano (JPL : **co-Chair**)

## ngVLA Science Advisory Council

- Interface between the science community & NRAO
- Recent/Current Activities:
  - Science working groups: science use cases → telescope requirements
  - Lead Science case development → 'science book' & DS2020 White Papers

Alberto Bolatto (University of Maryland: **co-Chair**)

Andrea Isella (Rice University : **co-Chair**)

Brenda Matthews (NRC-Victoria: **SWG1 Chair**)

Danny Dale (University of Wyoming: **SWG2 Chair**)

Dominik Riechers (Cornell: **SWG3 Chair**)

Joseph Lazio (JPL: **SWG4 Chair**)

# Bridging SKA & ALMA Scientifically

Thermal Imaging on mas Scales at  $\lambda \sim 0.3\text{cm}$  to  $3\text{cm}$

# Bridging SKA & ALMA Scientifically

Thermal Imaging on mas Scales at  $\lambda \sim 0.3\text{cm}$  to  $3\text{cm}$

Complementary suite from cm to submm arrays for the mid-21<sup>st</sup> century

- **< 0.3cm:** ALMA 2030 superb for chemistry, dust, fine structure lines
- **0.3 to 3cm:** ngVLA ngVLA superb for terrestrial planet formation, dense gas history, baryon cycling
- **> 3cm:** SKA superb for pulsars, reionization, HI + continuum surveys

# S/W and Computing Considerations

- **Code Development:** Approx. 2.6M new lines of code expected.
  - ALMA / VLA SLOC – 4.77M / 4.35M (Actual)
  - ngVLA SLOC – 5.75M (Projected).
  - Reuse estimated on each element of logical architecture.
  - 54% Average Reuse Projected – 2.63M new SLOC.
- **Risks:**
  - Depends upon continuation of the historic trend in cost of storage and compute capacity.
  - Uncertainty in time spent on cases (4 of 25 use cases) that need w-projection.
  - Uncertainty in algorithmic compute scaling for specific use cases.

|                                               | ALMA (SLOC)      | EVLA (SLOC)      | Estimation (MSLOC) | Estimated reuse (%) | Effort Size (MSLOC) |
|-----------------------------------------------|------------------|------------------|--------------------|---------------------|---------------------|
| <b>Online Subsystem</b>                       |                  |                  |                    |                     |                     |
